# INK RUB TESTER

MODEL IDMH0001-M1

## INTRODUCTION

IDM Ink Rub Testers determine the quality of adhesion, and scuff resistance of ink to paper surfaces, plastic and aluminum film. The motorized unit is simple to operate, by entering the number of rubs in the pre-set counter, and then starting the unit. It will rub the sample until the pre-set value is achieved.

Dry and Wet rub can be performed on the Ink Rub Tester. The method of operation is that a 2lb or 4lb weight with a clean white board is swept across the test piece for a set number of times, and then closely examined for scuffing.
